**A.N.A Amity Impex** heartily welcomes you & highly appreciates your interest in our Products range. We take pleasure in presenting you our new Edition of Surgical Catalogue. Honestly we feel proud to dedicate this achievement to you, our valued customer. Without your loyalty, professional support, encouragement & steady flow of innovative ideas, we would not be marking this momentous occasion.

With this dedication, we would also like to recognize and honor the unmatched services of our past & present highly skilled, dedicated instruments craftsmen, management & staff members. With this catalogue we wish to offer a modern range of Surgical Instruments.

**A.N.A** believes in the importance of improving the efficiency, convenience, and comfort of corrective treatment for both professionals and patients Care. With keeping this vision, we continually evaluate our existing products range time by time to ensure that we are providing the premium quality instruments based on latest technology & techniques.

This guide contains a wide variety of commonly ordered patterns; we have carefully selected around 7200 commonly used items for this Surgical Catalogue. These items from the core group of generally required instruments that most Surgeons, Professionals, Hospitals & Surgery Centers use daily for a broad range of procedures and patients care.

However, we have molds for 22,000 + Surgical Instruments. If you don't find, what you need in this catalogue, Please just provide us Master Sample or Technical blue print with material specification or simply provide the reference number from any International relevant standard Catalogue. We would produce a counter sample for your kind evaluation.

The instruments in this catalogue represents **A.N.A** mission of continuing to meet the requirements & demands of Top Professionals. We also work to add value to our client's business and build long term relationship based on high quality product range, in time delivery targets and with complete back up of excellent customer's services

We offer our Instruments at most competitive prices with standard of quality which are dually guaranteed under a legal cover. **A.N.A** is a reliable source to provide all the Surgical Instruments in excellent Quality. So, you can depend and relay on us to only deliver you the premium quality surgical instruments. Please also assist us in maintaining our **A.N.A** quality by informing us about any imitations.

We hope and Wish that this new product information guide will be a valuable help for you when selecting your requirements and demands. May this guide also give new impulses to our business partners throughout the Globe.

Thank you for your patronage of our Company. We truly value and appreciate the trust and confidence you have reposed in us.

Sincerely,

**Anjum Latif Chaudhary.**

**A.N.A Care & Handling Instructions for Instruments:**

**Valued Customers:**

Concerning your question on why staining, pitting or rusting can develop in stainless steel instruments, there are some Basic points for the care and handling of Dental instruments which extend the life of the instruments. Eliminate staining or corrosion and lower the cost in use.

These are as follow:

1. Instruments should be rinsed as soon as possible after use to remove blood, serum and saline. Do not use a sponge basin as any residue from normal saline solution can cause corrosion to develop over a period of time.

2. Instruments should be thoroughly dried after cleaning and before wrapping or storing, as moisture left in the box locked or serrations can cause rust or corrosion to develop.
3. Do not leave instruments in a cold sterilization soak solution for extended periods as these solutions tend to be corrosive (after cold sterilization, rinse the instrument in distilled or dematerialized water and dry thoroughly).
4. If using cold sterilization technique, change the solution according to directions as prolonged use will cause the solution to become corrosive.
5. Do not use caustic cleaners or any other cleaner except those specified for cleaning surgical instruments.
6. Do not clean instruments with steel wool or scouring powder, or use high pH detergents. If cleaning by Hand, use specific instruments cleaner or a natural detergent soap and a soft brush (rinse with Dematerialized or distilled water).
7. Check your autoclave iron. Sodium, calcium, magnesium or copper in your water can cause spotting, staining or corrosion to occur, in hard water areas, clean the line deposit from steam lines periodically or use distilled or dematerialized water for your autoclave, in stall steam filters if possible. It will remove most of dirt, rust & pipe scale.
8. Make sure your muslin wraps are rinsed sufficiently (6 to 8 times) by the laundry to remove all chlorine Bleach as any residue can cause staining or corrosion during autoclaving.
9. Do not leave instruments in the following solutions for extended periods as corrosion can result.
  - A) Aluminum, radium, calcium, ferrous or stannous chloride solution.
  - B) Phenol, Lysol or lording
  - C) Dakin's solutions or zephiran.
  - D) Any acid, mercury or potassium solution.
10. Do not sterilize stainless steel instruments with chrome plated instruments if possible, as any break in the surface of the chrome dissimilar metals, causing pitting and / or a rusty appearance to develop.
11. Preheat instruments in autoclave before allowing steam to enter, if possible, to prevent and excessive amount of condensation forming on the surface of the instruments.
12. Don't open autoclave too quickly after the sterilization cycle as excessive condensation will develop on the surface of the instruments (crack the clave if to allow the drying before opening fully.) If you follow the above rules and use instruments cleaners and lubricant milk such as our **A.N.A Amity** products, your instruments should remain rust, spot and stain free, We hope this will answer any questions you might have on this topic.

**A.N.A Care & Handling Recommendations for Instruments :**

- \* Brand new instruments should be cleaned prior to first sterilization.
- \* Contaminated instruments should be processed as soon as possible.
- \* Stubborn protein particles can be removed with a scrub brush. Do not use steel wool, abrasives or an acid rinse.
- \* All joints on instruments prior to preparation.
- \* Lubrication is vital to a long instrument life. Avoid silicon lubricants because they tend to build up and mix with Debris to clog moving parts, which becomes almost impossible to remove. Debris buildup can have a "rust-like" appearance.
- \* Rinse your cleaned instruments in dematerialized water. Be sure to remove all residual - cleaning compounds before Sterilization, as they can cause stains.
- \* Dry the instruments thoroughly after rinsing.
